3. Validation. The PTB has been shown in over two dozen major research studies, conducted by the Research Branch of the Psychological Services Division, to possess a high degree of validity for predicting performance in a substantive number of Agency job settings. Furthermore, "Uniform Guidelines" require that adverse impact studies must be conducted and must show that testing does not have an adverse impact on minorities. This was done and results showed that the PTB did not have an adverse impact on minorities. If further information is required, a Memorandum to the DD/A from D/MS dated 20 March 1980 (DDA 80-0805) summarizes the issues -- Reliability and Validity of the Agency's Professional Test Battery.
